

BurnPod™

...fully protected by System 203

**Need a Way to Save Money
&
Have the Protection You Need?**

BurnPod is the new concept for live fire training.

HTL's 12'x12'x8' modular burn room, reinforced concrete structure, comes fully lined with **System 203™** (an advanced thermal lining system designed specifically for Class A Live Fire Training Structures) to give you the most realistic Class A fire training. We pre-cast the **BurnPod** in our plant and deliver it to your site.

BurnPod is an affordable answer to provide Class A live fire training for:

EXISTING CIVIL STRUCTURES
OLDER BURN BUILDINGS
BURN TOWERS

Facility shown here was installed in March 2004 at Hanover Fire Department, VA:

Hanover's existing structure had been structurally compromised by years of training. HTL was uncomfortable loading the structure with the weight of lining systems, and recommended the addition of HTL's **BurnPod**. HTL provided three fully lined burn rooms and increased the size of the existing structure by about 20%. The existing structure was renovated with new doors, windows, concrete repairs and block work. Firefighters conduct VES, hose advancement and ventilation drills in the existing structure as they advance to the burn rooms.

Eddie Buchanan, Division Chief, at Hanover FD can be contacted at 804.537.6195.
